WORK EXPERIENCE

OSI Systems | PFC Flexible Circuits

Toronto, Canada

Quality Engineering Specialist

May 2025 – Present

- Manage **supplier quality performance** across **10+ suppliers** — issuing **SCARs**, leading **8D root cause analysis** and corrective action verification, and driving reduction in recurring non-conformances to minimize **cost of poor quality** and production disruption.
- Apply **APQP and PPAP principles** through AS9100D — authoring **PFMEAs** and **Control Plans**, interpreting customer **engineering drawings** to flow down requirements, conducting **MSA/Gauge R&R** and **Cpk studies**, and verifying part conformance through **FAI per AS9102**.
- Compile and report **supplier performance data** (SCAR volume, defect trends, on-time delivery) into **supplier scorecards** — supporting **AVL governance**, prioritizing SCAR escalations, and identifying suppliers needing development.
- Lead **8D root cause analysis** and corrective action for customer **NCRs** and **RMAs**, driving timely containment, root cause identification, and corrective action verification to prevent recurrence.
- Perform **First Article Inspections (FAI)** per **AS9102** in AS9100D-compliant format for PCBs and PCBA, conducting **Cpk analysis** to validate process capability and qualify new parts for production release.
- Drive **In-Process Quality Control (IPQC)** across SMT and PCBA assembly operations — performing **yield and defect trend analysis**, issuing **CARs**, and driving corrective action effectiveness to reduce scrap and rework.
- Conduct **internal audits** against **ISO 9001:2015, AS9100D, and ISO 13485:2016** requirements — identifying non-conformances, escalating findings, and verifying corrective action effectiveness across manufacturing operations.
- Partner with **cross-functional teams** including suppliers, engineering, and customers to apply quality tools (**FMEA, PFMEA, 5 Whys, Fishbone**) for problem-solving and process improvement initiatives.
- Maintain and update the **Quality Manual** governing all PCB/PCBA manufacturing operations to **ISO 9001:2015, AS9100D, & ISO 13485:2016**, enabling successful **AS9100D certification** and ongoing surveillance audit compliance.

OSI Systems | PFC Flexible Circuits

Toronto, Canada

Engineering Intern (Trainee Quality/Process Engineer)

May 2023 – May 2025

- Worked closely with the Quality Manager on **Incoming, Process, and Outgoing Quality Control** — including monitoring supplier quality, supporting teams assigned to **CARs**, and supporting implementation of **RMA dispositions**.
- Produced validation reports that consisted of **Installation Qualifications (IQ), Operational Qualifications (OQ), and Performance Qualifications (PQ)** for various production machinery.
- Amended work instructions for various departments.

EDUCATION

Ontario Tech University

Oshawa, Ontario

Mechanical Engineering – Bachelor of Engineering (Honors)

CERTIFICATIONS

A2M3 Auditing & Consulting Services

Scarborough, Ontario

TECHNICAL TOOLS

Quality Standards & Frameworks: ISO 9001:2015, AS9100D, ISO 13485:2016, IPC-A-610, AS9102

Quality Methodologies: APQP, PPAP elements (Control Plans, PFMEA, MSA/Gauge R&R, FAI, Cpk studies), 8D, Root Cause Analysis (5 Whys, Fishbone, Turtle Diagrams)

Process & Statistical Tools: SPC, Cpk/Process Capability Studies, MSA/Gauge R&R, FAI per AS9102

Engineering Tools: SolidWorks, Fusion 360, KiCad, EasyEDA

EXTRACURRICULAR ACTIVITIES

Campaign Manager – Municipal By-Election

- Led campaign strategy, volunteer coordination, and stakeholder communication for a municipal candidate; managed cross-functional efforts across canvassing, communications, and logistics under hard deadlines.
- Demonstrated ability to influence and coordinate teams — placing 4th of 14 candidates in a first-time campaign.
